

GammaLib - Bug #1098

Gammalib does not compile on Mac OS X 10.4

01/23/2014 11:56 AM - Knödseder Jürgen

Target version:			
Description			
Pierrick noted that GammaLib does not compile on Mac OS X 10.4.			
One of the issues is that the automake option -Wno-portability option is not supported by the old automake installed on Mac OS X 10.4 (automake version 1.6.3, autoconf version 2.59). The -Wno-portability option has been added earlier as this is needed for swig dependency tracking.			

History

- Subject changed from Gammab does not compile on Mac OS X 10.4 to Gammalib does not compile on Mac OS X 10.4

#2 - 06/28/2015 08:36 PM - Deil Christoph

This OS X version hasn't been supported by Apple for a long time. Most software won't build on it. My recommendation would be to close this now or wait for Pierrick's old Mac to die.
