

ctools - Feature #1152

Add ctool for quick look and checks

02/25/2014 12:31 PM - Deil Christoph

Target version:			
Description			
There should be a ctool (using Python / matplotlib) that can create a few common plots for quick look and checks, e.g. <ul style="list-style-type: none">• count, model and residual image at one or a few correlation radii• count, model and residual spectrum at for the whole field of view or a user-defined region. Ideally this script would have a few parameters like energy band for the image or region for the spectrum the user can select to get the plot she wants. Here's an example of plots I'd mean: http://enrico.readthedocs.org/en/latest/tutorial.html#check-results There is already some example code in the ctools repo: https://github.com/ctools/ctools/blob/devel/examples/make_binned_analysis.py#L243 What is needed is turning this into a command line tool and adding documentation to the ctools user manual. Anyone has time to share their existing scripts now or implement this?

In addition there should be a ctool that can summarise the IRFs for a given analysis, i.e. print some numbers and make some plots describing the effective area, PSF (and maybe energy resolution and background).

For csspec to produce count spectrum by default, I have created #1499.
