GammaLib - Feature #1338

Implement XML document element access going down a predefined hierarchy

10/23/2014 03:37 PM - Knödlseder Jürgen

Status:	Closed		**Start date:**	10/23/2014
Priority:	Normal		**Due date:**	
Assigned To:	Knödlseder Jürgen		**% Done:**	100%
Category:			**Estimated time:**	0.00 hour
Target version:	00-09-00			

Description

Going down a predefined hierarchy of an XML file is relatively cumbersome in the actual implementation. A GXmlNode::element() method should be implemented that takes a single string with a specific format that describes the XML access hierarchy, e.g.

params > param[1] > value > struct

will access the element

```
<params>
  <param>One</param>
  <param>
   <value>
    <struct>
```

History

#1 - 10/24/2014 08:25 PM - Knödlseder Jürgen

- Status changed from New to Closed

- Assigned To set to Knödlseder Jürgen

- Target version set to 00-09-00

- % Done changed from 0 to 100

Merged into devel branch.
