<b>Target version:</b>	1.0.0		
<b>Description</b>			
The cssens parameter interface should be modernised. The following improvements are requested:			
<ul style="list-style-type: none"><li>• An input model should be passed to cssens that will be used for sensitivity computation. This avoids the need for creating an internal model.</li><li>• An input observation group should be passed to cssens that allows computation of sensitivities for observation sets. This avoids the need to specify pointing schemes in the interface.</li><li>• The energy limits and number of bins should be passed as parameters to allow adapting of the script to a user specified binning. So far the binning is fixed internally.</li></ul>
