Target version:	1.0.0			

Description

The cssens parameter interface should be modernised. The following improvements are requested:

- An input model should be passed to cssens that will be used for sensitivity computation. This avoids the need for creating an internal model.
- An input observation group should be passed to cssens that allows computation of sensitivities for observation sets. This avoids the need to specify pointing schemes in the interface.
- The energy limits and number of bins should be passed as parameters to allow adapting of the script to a user specified binning. So far the binning is fixed internally.
