

GammaLib - Bug #1605

Correct library post processing on El Capitan

12/16/2015 10:36 PM - Knödlseeder Jürgen

Status:	Closed	Start date:	12/16/2015

Target version:			
Description			
Michael Mayer noted the following:			
Note that since a few days, when I modify the python interface, I need make clean and a full rebuild to make it run again. Otherwise I get the following error messages (don't know if this is just a problem on my machine):			
Post process module build/gammlib/_app.so error: install_name_tool: for: build/gammlib/_app.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/lib" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/lib error: install_name_tool: for: build/gammlib/_app.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/src/.libs" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/src/.libs Post process module build/gammlib/_base.so error: install_name_tool: for: build/gammlib/_base.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/lib" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/lib error: install_name_tool: for: build/gammlib/_base.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/src/.libs" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/src/.libs Post process module build/gammlib/_com.so error: install_name_tool: for: build/gammlib/_com.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/lib" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/lib error: install_name_tool: for: build/gammlib/_com.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/src/.libs" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/src/.libs Post process module build/gammlib/_cta.so Post process module build/gammlib/_fits.so error: install_name_tool: for: build/gammlib/_fits.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/lib" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/lib error: install_name_tool: for: build/gammlib/_fits.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/src/.libs" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/src/.libs Post process module build/gammlib/_lat.so error: install_name_tool: for: build/gammlib/_lat.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/lib" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/lib error: install_name_tool: for: build/gammlib/_lat.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/src/.libs" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/src/.libs Post process module build/gammlib/_linalg.so error: install_name_tool: for: build/gammlib/_linalg.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/lib" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/lib error: install_name_tool: for: build/gammlib/_linalg.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/src/.libs" would duplicate path, file already has LC_RPATH for: /Users/mimayer/Software/gammlib/src/.libs Post process module build/gammlib/_model.so error: install_name_tool: for: build/gammlib/_model.so (for architecture x86_64) option "-add_rpath /Users/mimayer/Software/gammlib/lib" would duplicate path, file already has LC_RPATH for:			

[illegible]

```
Post process module build/gammlib/_xspec.so
error: install_name_tool: for: build/gammlib/_xspec.so (for architecture x86_64) option "-add_rpath
/Users/mimayer/Software/gammlib/lib" would duplicate path, file already has LC_RPATH for:
/Users/mimayer/Software/gammlib/lib
error: install_name_tool: for: build/gammlib/_xspec.so (for architecture x86_64) option "-add_rpath
/Users/mimayer/Software/gammlib/src/.libs" would duplicate path, file already has LC_RPATH for:
/Users/mimayer/Software/gammlib/src/.libs
make[2]: *** [build] Error 1
make[1]: *** [install] Error 2
make: *** [install-recursive] Error 1
```

The probable cause is the post processing introduced for El Capitan. If the post processing is applied to a library that has already been post processed, the errors should occur.

History

#1 - 12/17/2015 02:09 AM - Knödseder Jürgen

Note that otool -l can be used to check whether a load path exists:

```
$ otool -l src/.libs/libgamma.dylib | grep "path test"
      path test (offset 12)
```

Furthermore, we can test whether an output is empty or not using:

```
$ if [[ $(otool -l src/.libs/libgamma.dylib | grep "path test") ]]; then echo "yes"; else echo "no"; fi
```

#2 - 12/17/2015 02:20 AM - Knödseder Jürgen

- Status changed from New to Feedback

See also https://www.gnu.org/software/make/manual/html_node/Errors.html for a nice way to simply ignore errors.

I implemented this and pushed into devel. You still get the verbose output, but it should no longer lead to an error. Tell me Michael if this works for you.

#3 - 12/17/2015 09:53 AM - Mayer Michael

- Status changed from Feedback to Resolved

Thanks, it now works. I don't get errors any more when updating the python interface.

#4 - 12/17/2015 02:09 PM - Knödseder Jürgen

- Status changed from Resolved to Closed
