

GammaLib - Change request #1660

Implement full support for ds9 format in GSkyRegions

02/09/2016 11:41 AM - Knödseder Jürgen

Status:	New	Start date:	02/09/2016
Priority:	Normal	Due date:	
Assigned To:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
<p>The current implementation in GSkyRegions assumes that a region is defined per line, but ds9 format specifies:</p> <p>All lines may be delimited with either a new-line or semi-colon.</p> <p>circle 100 100 10 ellipse 200 200 20 40 ; box 300 300 20 40</p> <p>See http://ds9.si.edu/doc/ref/region.html#RegionFileFormat for a definition of the format that should be supported.</p>
