Description			
Dear the system admin			
Hi, my name is Tan. I have a question.			
Can it possible to convert a CEL coordinate value to GAL coordinate value by python code? If possible, how can I use it?			
Thank you for reading me.			
Tan

The answer is yes.

See <http://cta.irap.omp.eu/gammalib/howto/sky.html#how-to-convert-sky-map-projections>. Just replace the HEALPix map in the example by a WCS CEL map.

#2 - 02/26/2016 09:42 AM - Knödseder Jürgen

I recognized that this does maybe not answer your question, as you were asking about coordinates, not maps. Here is how to do this with coordinates:

```
dir=gammalib.GSkyDir()
dir.radec_deg(83.63,22.01)
l=dir.l_deg()
b=dir.b_deg()
print(l,b)
```

Maybe we should add a respective section in the documentation?
