<b>Target version:</b>	1.1.0		
<b>Description</b>			
The GModelSky XML constructor does not read all attributes as it implements the reading of the XML information instead of calling the read() method.			
The read() method should be called instead.

The GModel::read\_attributes() and GModel::write\_attributes() have been introduced to consistently read and write model attributes in all relevant constructors and methods. A further advantage is that code duplication is reduced.

Code merged into devel.
