Description <p>The current logic of GSkyMap is that if a file exists, and clobber=true, the map is appended as an additional extension of the file. The logic should however be that the map is replaced.</p> <p>The question is then how to deal with maps that should be appended to an existing file. There are three possibilities:</p> <ul style="list-style-type: none">• append to a file if clobber=false• add another flag to the list of arguments for appending to a file• use the write() method <p>The last option seems to me the most appropriate one.</p>
