

GammaLib - Action #1855

Add GSkyDir::moon() method

09/28/2016 06:50 PM - Knödlseider Jürgen

Status:	Closed	Start date:	09/28/2016
Priority:	Normal	Due date:	
Assigned To:	Knödlseider Jürgen	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	1.7.0		
Description			
A moon(const GTime& time) method should be added to the GSkyDir class that returns the position of the moon for a given time with an accuracy sufficient for gamma-ray astronomy (see #1854 for a corresponding method for the Sun position).			

History

#1 - 07/08/2019 10:50 AM - Knödlseider Jürgen

- Target version set to 1.7.0

#2 - 11/14/2019 12:07 AM - Knödlseider Jürgen

- File Moon_position_difference.png added
- File test_moon_ephem.py added
- Status changed from New to Pull request
- Assigned To set to Knödlseider Jürgen
- % Done changed from 0 to 100

The method has been implemented inspired by the IDL code moonpos.pro, see <https://github.com/awmann/amObserve/blob/master/moonpos.pro>. A note on the computation method can be found at https://ntomasse.web.cern.ch/Notes/tomassetti_ams02algorithms.pdf.

I used the script attachment:test_moon_ephem.py to compare the Moon position computed using GSkyDir::moon() to the one computed using PyEphem, the results are shown below for the period 2000 - 2050. Overall the accuracy is quite good, but becomes worse at the end of the period. However, it never becomes worse than 1 arcmin, which should be okay for gamma-ray astronomy.

#3 - 11/14/2019 07:15 AM - Knödlseider Jürgen

- Status changed from Pull request to Closed
