Target version:	1.5.0		
Description			
Dear all,			
I was trying to use csspec with Fermi data from crab observations. Once I have defined an observation definition XML file: <observation_list title="observation library">			
<lt;observation name="Crab" id="00001" instrument="LAT"> <lt;parameter name="CountsMap" file="/srcmap.fits"/> <lt;parameter name="ExposureMap" file="/binned_expmap.fits"/> <lt;parameter name="LiveTimeCube" file="/lrcube.fits"/> <lt;parameter name="IRF" value="P7SOURCE_V6"/> <lt;/observation> </observation_list>			
I can use ctlike with unbinned and binned data but not csspec.			
I get this error message: RuntimeError: *** ERROR in GLATResponse::nroi(GModelSky&, GEnergy&, GTime&, GObservation&): Spatial integration of sky model over the data space is not implemented.			
Did I missing something or I just cannot use csspec with Fermi data?			
Thanks, Gonzalo			

History

#1 - 10/18/2017 02:00 PM - Knödlseider Jürgen

- Project changed from GammaLib to ctools
- Assigned To set to Knödlseider Jürgen
- Target version set to 1.5.0

#2 - 10/18/2017 09:14 PM - Knödlseider Jürgen

- File spectrum.png added
- Status changed from New to In Progress
- % Done changed from 0 to 80

I implemented the NODES method in csspec which replaces the spectral source model by a nodes function and extracts the fitted node values into the spectrum. Using the GammaLib Pass 8 test data, the following run works:

```
$ csspec debug=yes
Input event list, counts cube, or observation definition XML file [obs_binned.xml]
Input model definition XML file [source_model.xml]
Source name [Crab]
Spectrum generation method (SLICE|NODES|AUTO) [AUTO]
```

```

Binning algorithm (LIN|LOG|FILE) [LOG]
Lower energy limit (TeV) [0.1] 0.0002
Upper energy limit (TeV) [100.0] 0.02
Number of energy bins [10]
Output spectrum file [spectrum.fits]

2017-10-18T19:09:22: Application "csspec" terminated after 86 wall clock seconds, consuming 71.7455 seconds of CPU time.
```

Note that the AUTO method was used that automatically determines whether the data can be sliced (typically for CTA observations), or whether a node function should be used for fitting.

The TS values are computed by setting individual nodes to tiny intensities. So far now upper limit computation is implemented.

Below the resulting spectrum.

The upper limit computation for the NODES method is still outstanding. I created action #2233 for that. Close this support issue now.
