

GammaLib - Bug #2126

TypeError: in method 'GCTAOnOffObservation_likelihood', argument 5 of type 'double **'

06/16/2017 11:01 AM - Rodriguez Fernandez Gonzalo

Status:	Closed	Start date:	06/16/2017
Priority:	Normal	Due date:

Target version:	1.4.0		
Description Dear all, I am testing the ON & OFF CTA observation. The fit goes well, but when I just try to obtain the likelihood value using: <pre>fit_models = onoff_container.models() gradient = gammalib.GVector() curvature = gammalib.GMatrixSparse() npred = [] value = onoff_container[0].likelihood(fit_models, gradient, curvature, npred)</pre> I get this error: TypeError: in method 'GCTAOnOffObservation_likelihood', argument 5 of type 'double **' I have tried different options to pass the npred variable, but I always get this error message. I send you the python script with the xml files to reproduce the error msg. Thanks in advanced! Gonzalo.			

History

- Status changed from New to Feedback
- Assigned To set to Knödlseider Jürgen
- Target version set to 1.4.0
- % Done changed from 0 to 90

There was a Python typemap missing in the SWIG interface that prevented the acceptance of a Python float as an argument. I added the missing typemap and merged the change into the devel branch.

Note, however, that the method expects a single variable and not an array. Here is the code that works fine on my side:

```
fit_models = onoff_container.models()
gradient = gammalib.GVector()
curvature = gammalib.GMatrixSparse()
npred = 0.0
value = onoff_container[0].likelihood(fit_models, gradient, curvature, npred)
print(npred)
```
