Description			

History

#1 - 10/26/2017 08:46 PM - Knödlseider Jürgen

- Status changed from New to In Progress
- % Done changed from 0 to 80

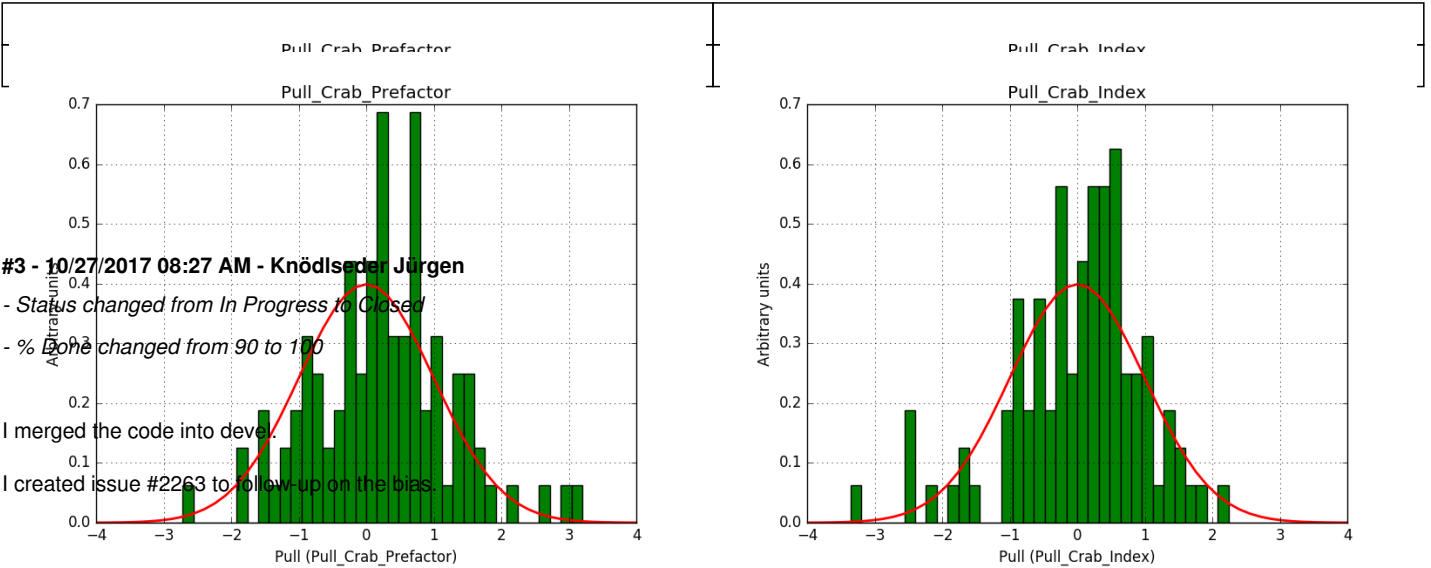

The simulation of On/Off observations was implemented in the obsutils.sim() function.

csphagen has been modified so that the number of true energy bins per decade can be selected. In addition, the true energy range is now always wider than the reconstructed energy range which turned out to be crucial for getting correct pull distributions. The etruemin, etruemax, and etruebin parameters were added to csphagen.

#2 - 10/26/2017 10:16 PM - Knödlseider Jürgen

- File Prefactor10.png added
- File Index10.png added
- File Prefactor20.png added
- File Index20.png added
- % Done changed from 80 to 90

Below pull distributions for 10 (top) and 20 (bottom) reconstructed energy bins. There seems to be a small bias towards too large prefactors.
