#### Description

I am trying to install ctools on scientific linux 7.  
It seems that make check does not test the software.  
The folder test/reports only contains the notes.txt file.  
The results of the make check command together with the config.log  
of gammadlib and ctools are attached.

I saw that an issue was reported a few years ago on this,  
but I could not get how that was solved.
