

GammaLib - Action #2732

Make sure that energy boundaries for energy dispersion are computed correctly

11/09/2018 10:52 AM - Knödlseider Jürgen

Status:	New	Start date:	11/09/2018
Priority:	Normal	Due date:	
Assigned To:		% Done:	0%

Target version:			
Description			
In principle the energy boundaries for energy dispersion will depend on the position in the field of view, however this information is so far ignored.			
It should be made sure that the energy boundaries apply to all sky directions. This could be achieved by having common energy boundaries for all sky directions. So far the GCTAResponseIrf::ebounds() computes the energy boundaries for theta=0.
