Description

Monica reports the following:

I have updated to Ubuntu 20.04 now and have found out the following:

1) I was hitting a conda bug not specific to ctools which created many conflicts.

I saw a similar bug reported here:
https://github.com/nanoporetech/medaka/issues/117

This was fixed by modifying ~/.condarc and removing strict:
channel_priority: strict
Using flexible worked!

2) I was not able to install ctools with python 3.8 like in my MAC, but python 3.7 worked with the standard instructions in Ubuntu.
