# Development notes

This page summarizes development notes for the ctools software.

Please use these pages to track your developments and any information related to your coding. For example, note the basic assumptions that have been made in implementing a tool. Or note a kluge that was used. Also, specify if things need to be improved further.

If you add a new page, please put

{{lastupdated\_at}} by {{lastupdated\_by}}

in the first line of the Wiki page so that the modification date and the person who did the modification is visible at top of the page.

## Introduction

## Event selection and binning

- [[ctselect]]
- [[ctbin]]
- [[ctskymap]]

## Response computation tools

## Source and background modeling tools

- [[ctmodel]]

## Fitting tools

- [[ctlike]]
- [[cspull]]

## Performance tools

- [[cssens]]
- [[cstdist]]

## Simulation tools

- [[ctobssim]]
- [[ctpoisson]]
