GRegistry

GRegistry is the interface class for all registry classes in GammaLib. The class is an abstract base class which defines the methods that all registry classes are required to implement. Below the interface definition

```
class GRegistry {  
public:  
    virtual ~GRegistry(void) {}  
    virtual int      size(void) const = 0;  
    virtual std::string name(const int& index) const = 0;  
    virtual std::string print(void) const = 0;  
};
```
