

GammaLib 00-05-00 release

The purpose of the GammaLib 00-05-00 release is to provide a software version that is adapted to the analysis of CTA 1DC data.

The release includes the following changes:

- Update license text
- Add configure options for Mac OSX universal builds
- Break gammalib Python extension into modules
- Comply to CTA event list format v1.0.0
- Implement XML protocol for observation loading
- Add support for CTA 1DC response format
- Add GCTAResponseTable class for response file handling
- Add GCTAModelRadialPolynom model
- Add GCTAModelRadialProfile model
- Add GModelSpectralNodes model
- Correct Npred integration in GCTAModelRadialAcceptance
