Version 1.0.0

GammaLib version 1.0.0 has been released.

This is the first stable release of GammaLib. The package is now under change control.

The following changes have been implemented with respect to the previous release:

- Ignore errors for El Capitan post processing (#1605)
- Read only mandatory columns in GCTAEventList (#1600)
- Remove extname arguments from classes (#1601)
- Add GFilename class (#1599)
- Check existence of files in CTA response loading (#1586)
- GSkyMap::__getitem__ throw exception if out of bound (#1581)
- Handle ~ in filenames (#1580)
- Add GModel::has_ts() method (#1578)
- Perform *init*.py creation only in build step (#1569)
- Remove access by name methods from GSkyRegions (#1564)
- Resolve Python test problem on El Capitan (#1563)
